Python for Data Science

Sirakorn Lamyai

August 11, 2019

Student, Kasetsart U.

About me

Sirakorn Lamyai

- DAKDL Laboratory, Kasetsart University
- Research Assistant Intern, 2019, Vidyasirimedhi Institute of Science and Technology
- Research Assistant Intern, 2018, Vidyasirimedhi Institute of Science and Technology
- Love drinking tea
- Knows a little about Python

I know a little about Python

When I say I know *a little* about Python...

- I think there's some better methods than I'm using
- I think I do sometimes make mistakes
- There are tons of people who know things much more than me
- I think there's much more for me to learn!

Prerequisite

A basic Python knowledge will do!

Your expectations from this talk

Outline

Data Science

Python

- Python environments
- Jupyter

Python Data Structures

Data Science

The Data Science Process: OSEMNI

- **Obtain** data from relevent sources
- **Scrub**, sanitise, and clean the data into machine-understandable formats
- **Explore** significant and meaningful patterns with statistical methods
- **Model** construction for prediction and forecast
- **iNterpret** and use the results obtained
- **Interate** and rethink about your outputs

Data is the new oil

Tools for data analysis

With GUIs

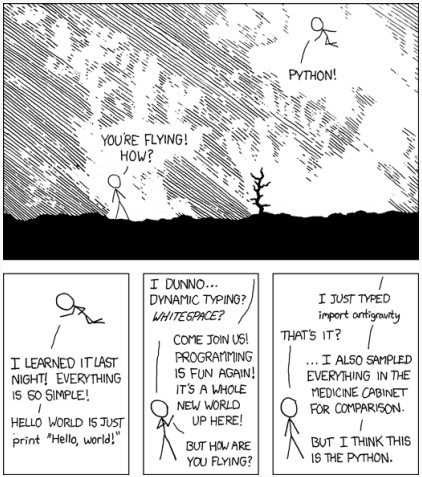
- Spreadsheets
  - Excel
  - Google Spreadsheets
  - Lotus 1-2-3
- Modelling and Visualisation
  - RapidMiner Studio
  - Weka
  - Tableau

As programming languages

- For data insights
  - R
  - Python
- For data retrieval
  - SQL

Python

Python



Courtesy: xkcd (`https://xkcd.com/353/`)

I *loved* Python...

- Read it, understand it
- Multiparadigm
- Batteris included
- Lots of great, great libraries!

Python Packages

`pip`

`pip`

- **PyPA** (**Py**thon **P**ackaging **A**uthority)'s recommended package installer

Python Packages

`pip`

- **PyPA** (**Py**thon **P**ackaging **A**uthority)'s recommended package installer
- Obtains packages from **PyPI** (**Py**thon **P**ackaging **I**ndex)

Python Packages

`pip`

- **PyPA** (**Py**thon **P**ackaging **A**uthority)'s recommended package installer
- Obtains packages from **PyPI** (**Py**thon **P**ackaging **I**ndex)
- Many useful packages for us to use!

Anaconda Python Distribution

Anaconda Python Distribution

Anaconda Python Distribution

- Cross-platform Python Distribution

Anaconda Python Distribution

- Cross-platform Python Distribution
- Ships with its own package and environment manager

Anaconda Python Distribution

- Cross-platform Python Distribution
- Ships with its own package and environment manager
  - Its environment manager capability is not found in Python vanilla installation

Anaconda Python Distribution

- Cross-platform Python Distribution
- Ships with its own package and environment manager
  - Its environment manager capability is not found in Python vanilla installation
  - Fetches the packages from its own repository, not PyPI

Anaconda Python Distribution

- Cross-platform Python Distribution
- Ships with its own package and environment manager
  - Its environment manager capability is not found in Python vanilla installation
  - Fetches the packages from its own repository, not PyPI
- Aims for Data Science use

Anaconda Python Distribution

- Cross-platform Python Distribution
- Ships with its own package and environment manager
  - Its environment manager capability is not found in Python vanilla installation
  - Fetches the packages from its own repository, not PyPI
- Aims for Data Science use
- **Entirely separated Python**

Environments 101: `$PATH`

```
$ echo $PATH
/home/srakrn/.pyenv/plugins/pyenv-virtualenv/shims:/home/
   srakrn/.pyenv/shims:/home/srakrn/.pyenv/bin:/home/srakrn
   /.local/bin:/usr/local/bin:/usr/local/sbin:/home/srakrn/.
   local/bin:/usr/sbin:/usr/bin:/sbin:/bin:/usr/games:/usr/
   local/games:/snap/bin
```

Different machines, different Pythons

On my laptop...

```
srakrn@epsilon-ubuntu:~$ which python
/home/srakrn/.pyenv/shims/python
```

On my https://charles.srakrn.me/ server...

```
srakrn@charles:~$ which python
/usr/bin/python
srakrn@charles:~$ which python3
/usr/bin/python3
```

Installed pip

```
$ pip -V
pip 8.1.1 from /usr/lib/python2.7/dist-packages (python 2.7)
$ pip3 -V
pip 8.1.1 from /usr/lib/python2.7/dist-packages (python 3.6)
```

Perhaps now you understand me...

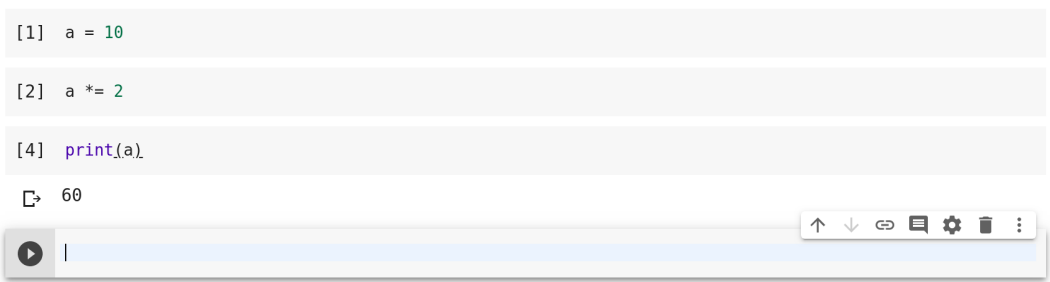
print("It is now {}".format(datetime.now()))

Caveats 1: Execution order

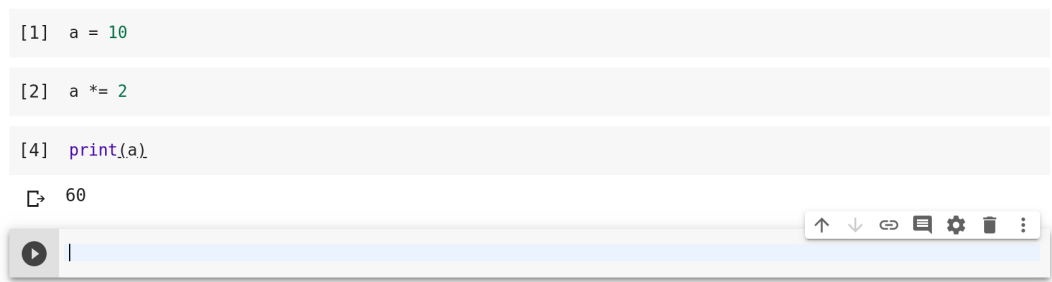
Caveats 1: Execution order

You'll do a lot of out-of-order code execution!

Caveats 2: Cell edits



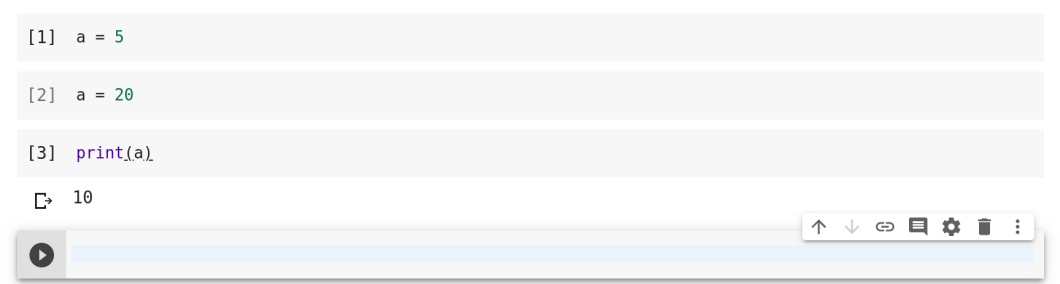
Caveats 2: Cell edits



You might sometimes remove a cell, and that shows no visible trace without explicit query.

Caveats 2: Cell edits

Caveats 2: Cell edits



Jupyter Notebook offers no cell edited marks, while Colab offers them

Caveats 2: Cell edits

Jupyter Notebook offers no cell edited marks, while Colab offers them (note: observe the greyed out cell number)

Caveats 3: Be neat and tidy

Jupyter Notebook and Colab, unlike IDE and code editors, offers a relatively poor **clean code** tools

- Syntax error highlighting
- Autocomplete
- Linting
- Code formatter

Sirakorn's Workflow Demo

Caveats 3: Be neat and tidy

Sirakorn's Workflow Demo

*(Please don't be amused, this is **very** normal.)*

Python Data Structures

Lists

```
a = [1, 2, 3, 4, 5]
b = ["Cats", "Dogs", "Penguins
    ", "Tonkatsu Pieces"]
c = [1, "1", True]
```

Lists

```
a = [1, 2, 3, 4, 5]
b = ["Cats", "Dogs", "Penguins
    ", "Tonkatsu Pieces"]
c = [1, "1", True]
```

- **Lists** are a compilation of objects.

Lists

```
a = [1, 2, 3, 4, 5]
b = ["Cats", "Dogs", "Penguins
    ", "Tonkatsu Pieces"]
c = [1, "1", True]
```

- **Lists** are a compilation of objects.
- Can store multiple data types.

Lists

```
a = [1, 2, 3, 4, 5]
b = ["Cats", "Dogs", "Penguins", "Tonkatsu Pieces"]
c = [1, "1", True]
```

- **Lists** are a compilation of objects.
- Can store multiple data types.
  - This includes storing lists in a list

Lists

```
a = [1, 2, 3, 4, 5]
b = ["Cats", "Dogs", "Penguins", "Tonkatsu Pieces"]
c = [1, "1", True]
```

- **Lists** are a compilation of objects.
- Can store multiple data types.
  - This includes storing lists in a list
  - So-called a **nested list**

Lists

```
a = [1, 2, 3, 4, 5]
b = ["Cats", "Dogs", "Penguins", "Tonkatsu Pieces"]
c = [1, "1", True]
```

- **Lists** are a compilation of objects.
- Can store multiple data types.
  - This includes storing lists in a list
  - So-called a **nested list**
- Can be resized.

Lists

```
a = [1, 2, 3, 4, 5]
b = ["Cats", "Dogs", "Penguins
    ", "Tonkatsu Pieces"]
c = [1, "1", True]
```

- **Lists** are a compilation of objects.
- Can store multiple data types.
  - This includes storing lists in a list
  - So-called a **nested list**
- Can be resized.
  - No need to declare its size on the first declaration.

Lists

Accessing list

```
a = [1, 2, 3, 4, 5]
a[0]     # Accessing elements
a[1:3]   # Slicing
```

Lists

Accessing list

```
a = [1, 2, 3, 4, 5]
a[0]     # Accessing elements
a[1:3]   # Slicing
```

Lists

```
a = [1, 2, 3, 4, 5]
a[0]     # Accessing elements
a[1:3]   # Slicing
```

Accessing list

- **Elementwise**: accessing one elements at a time)

Lists

```
a = [1, 2, 3, 4, 5]
a[0]     # Accessing elements
a[1:3]   # Slicing
```

Accessing list

- **Elementwise**: accessing one elements at a time)
- **Slicing**: accessing a sublist

List Functions

```
vowels = ["a", "e", "o", "u"]

# Get a's length
len(a)
# Append the new element to the end of a
a.append("y")
# Deletes the first occurence of the element from a
a.remove("y")
# Inserts the item into a list with a specified index
a.insert(2, "i")
```

List Functions

```
vowels = [1, 3, 2, 5, 4]
# Get the first index of a specified element
a.index(4)
# Sort a list and store into a new list
sorted_a = sorted(a)
# Sort a list, making changes directly to the old one
a.sort()
```

Dictionary

```
names = {
    "Cherprang": "Cher",
    "Manipa": "Khamin",
    "Jiradapa": "Pupe"
}

kami_nickname = names["Manipa"]
```

Dictionary

```
names = {
    "Cherprang": "Cher",
    "Manipa": "Khamin",
    "Jiradapa": "Pupe"
}

kami_nickname = names["Manipa"]
```

- **Dictionaries** store values in a **key-pair** format.

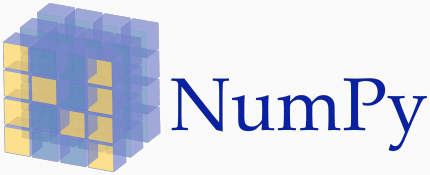
Dictionary

```
names = {
    "Cherprang": "Cher",
    "Manipa": "Khamin",
    "Jiradapa": "Pupe"
}

kami_nickname = names["Manipa"]
```

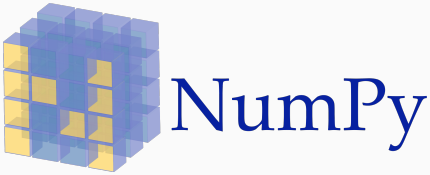
- **Dictionaries** store values in a **key-pair** format.
- From the positional index, dictionary takes the key as an index instead.

NumPy



NumPy

NumPy



- NumPy is a powerful library for mathematical computation in Python

NumPy

- NumPy is a powerful library for mathematical computation in Python
- It offers wide range of tools from data structures to advanced functions and operations

NumPy

- NumPy is a powerful library for mathematical computation in Python
- It offers wide range of tools from data structures to advanced functions and operations
- A very strong ease in mathematical computation, **don't reinvent the wheels!**
